

MEDILINK CASE STUDY

Making Healthcare Accessible

OVERVIEW

MediLink is a digital healthcare platform that allows users to find verified doctors, book appointments, and access care easily. I designed a landing page that communicates trust, simplicity, and accessibility in healthcare.

GOALS

Website Landing Page

- To create a clean, user-friendly landing page that:
- Builds trust instantly
- Clearly explains the service
- Encourages users to book appointments

E-mail marketing Design

- To create a simple, reassuring, and action-driven email that:
- Builds familiarity
- Communicates ease of use
- Encourages appointment booking

MY ROLE

- UI/UX Designer
- Tools: Figma, AI tools, Canva

PROCESS

For Website Landing Page design

- Researched healthcare and SaaS landing pages,
- Focused on trust-based design (color, spacing, structure)
- Structured the page for clarity:
 - Hero → Features → How it works → Social proof → CTA
- Used AI tools for layout exploration and content ideas
- Refined the design to improve readability and hierarchy

For Email design

- Focused on clarity and simplicity due to the healthcare context
- Structured the email for easy reading:
- Headline → Value → Features → Social proof → CTA
- Used AI tools to generate and refine messaging
- Designed with mobile-first thinking

KEY DESIGN DECISIONS

- Used blue/green tones to communicate trust and reliability
- Simplified content to make the platform easy to understand
- Broke down the process into clear steps ("How it works")
- Added testimonials to build credibility
- Used strong CTA placement to guide user action

OUTCOME

This project highlights my ability to design clear, structured, and user-focused interfaces for service-based platforms, especially where trust and simplicity are key.
